

ASP.NET Using Visual C# 2005

Table of Contents

INTRODUCTION	INTRO-1
Prerequisites	INTRO-2
Installing the Practice Files	INTRO-3
Software Requirements	INTRO-3
Installation	INTRO-3
The Chapter Files	INTRO-3
Sample Database	INTRO-3
Security	INTRO-4
About the Authors	INTRO-5
INTRODUCTION TO ASP.NET	1-1
A Review of Classic ASP	1-2
Dynamically Creating Web Pages	1-2
An ASP Example	1-2
ASP Shortcomings	1-9
ASP.NET to the Rescue	1-12
ASP.NET Web Applications	1-14
Creating a New Web Application	1-14
Rendering HTML with Server Controls	1-19
Types of Server Controls	1-19
Using HTML Controls	1-22
Using Web Controls	1-31
Data Binding in ASP.NET 2.0	1-37
LAB 1: INTRODUCTION TO ASP.NET	1-45
Lab 1 Overview	1-46
Working with Web Controls	1-47
Displaying Data in Web Controls	1-49
WHAT'S NEW IN ASP.NET 2.0	2-1
New Features in ASP.NET 2.0	2-2
The ObjectDataSource Control	2-2
The GridView Control	2-3
Creating and Consuming Web Services	2-5
Encrypting Configuration Sections	2-6
Membership	2-8

Web Parts and Personalization.....	2-10
Designer Features	2-13
Master Pages.....	2-13
Themes and Skins	2-18
Controlling Automatic Formatting.....	2-19
IntelliSense in Source View	2-21
Deployment and Configuration Tools	2-23
The Web Site Administration Tool	2-23
Copy and Publish Web Sites	2-24
Increasing Productivity.....	2-26
Developer Productivity	2-26
Team Productivity	2-26
WORKING WITH CONTROLS.....	3-1
Introduction to Web Controls	3-2
The WebControl Class.....	3-3
The Label Control	3-4
Simple Input Controls	3-7
TextBox Controls	3-7
CheckBox Controls	3-8
RadioButton Controls.....	3-10
HyperLink and Button Controls.....	3-12
Postback Behavior	3-12
HyperLink Controls	3-12
Button Controls	3-14
Displaying Images.....	3-18
Using the ImageMap Control	3-20
List Controls.....	3-24
The Sample Page	3-24
Adding Items to Lists.....	3-25
Adding Items Programmatically	3-27
Handling Selections and Postbacks.....	3-29
Clearing Selected Items.....	3-32
Removing Items	3-32
Controlling Focus.....	3-34
Setting Form Defaults	3-35
Calling the Focus() Method.....	3-36
Using TabIndex and AccessKey	3-36
Overriding Default Button Settings with Panel Controls.....	3-37

LAB 3: WORKING WITH CONTROLS	3-43
Lab 3 Overview	3-44
Creating Web Forms Controls	3-45
Making Web Forms Controls Work	3-48
USING RICH SERVER CONTROLS.....	4-1
Introduction to Rich Controls	4-2
The Calendar Control	4-3
Working with the Calendar Control	4-3
Handling Calendar Events	4-9
Adding Custom Content with DayRender	4-14
Investigating the Client-Side Code.....	4-18
The AdRotator Control.....	4-21
How the AdRotator Works	4-22
Setting Up the Advertisement File	4-22
Advertisement File Contents.....	4-23
Adding User-Defined Elements.....	4-24
Setting the Target Frame	4-24
Filtering Images with the KeywordFilter Property	4-26
Using the AdCreated Event	4-27
The XML Control.....	4-29
Setting the XML Control Properties	4-31
Providing the Style Sheet.....	4-32
LAB 4: USING RICH SERVER CONTROLS.....	4-37
Lab 4 Overview	4-38
Work with the Calendar Control.....	4-39
Work with the AdRotator Control	4-41
ACCESSING DATA.....	5-1
Overview of ADO.NET	5-2
ADO.NET Classes	5-2
The ADO.NET Architecture.....	5-3
Creating ADO.NET Data Objects.....	5-4
The DataTable Object.....	5-4
Connecting to Data	5-9
Setting up Connection Information.....	5-9
Using the Connection Object	5-12
Executing Commands.....	5-15

Using a SqlDataReader	5-16
Working with Data.....	5-20
Working with Data Using a Data Adapter	5-20
Managing Data with the DataSet Object.....	5-20
Filling a DataTable within a DataSet.....	5-22
Filling DataSets from SQL Server.....	5-25
Choosing an ADO.NET Provider	5-30
The SQL Server .NET Data Provider.....	5-30
The OLE DB .NET Data Provider	5-30
The ODBC Data Provider	5-31
Writing Code for Multiple Providers	5-31
LAB 5: ACCESSING DATA.....	5-41
Lab 5 Overview.....	5-42
Use a Data Reader to Fill a ListBox with Categories.....	5-43
Use a DataSet to Fill a GridView with Products.....	5-47
CONFIGURATION	6-1
Configuration Overview	6-2
Navigating the Configuration File Hierarchy	6-2
Configuration File Elements.....	6-5
Sample Web.config.....	6-7
ASP.NET Configuration Tools	6-8
Configuration Security Features	6-9
Using the Web Site Administration Tool	6-11
The Web Site Administration Tool Graphical User Interface	6-11
Using the Web Site Administration Tool to Create a Custom Error Page	6-12
Programming Configuration Files	6-17
The Configuration APIs.....	6-17
Storing and Retrieving Connection Strings	6-18
Writing to Configuration Files.....	6-23
Using External Configuration Files.....	6-28
Encrypting Configuration Sections.....	6-32
Protected Configuration Providers	6-32
Encrypting the connectionStrings Section in Web.config.....	6-33
Encrypting External Configuration Files.....	6-37
LAB 6: CONFIGURATION.....	6-43
Lab 6 Overview.....	6-44

Using the Web Site Administration Tool	6-45
Reading Application Settings from Web.config.....	6-49
DATA BINDING	7-1
Introducing Data Source Controls.....	7-2
Introducing Data-Bound Controls.....	7-4
Reading and Write Data Using the SqlDataSource Control	7-5
Bind a DropDownList Control.....	7-5
Display Product Information in a DetailsView Control.....	7-11
Filter Data Based on the DropDownList Value	7-14
Data Source Control Events	7-18
Should You Use the SqlDataSource Control?	7-23
Displaying and Editing Middle-Tier Data using the ObjectDataSource Control.....	7-25
Displaying XML Data Using the XmlDataSource Control	7-33
Configuring the XmlDataSource Control.....	7-34
Add the FormView Control.....	7-35
LAB 7: DATA BINDING	7-45
Lab 7 Overview.....	7-46
Display a DropDownList of Categories	7-47
Display a GridView Control with the Selected Category Information	7-51
Display and Edit the Selected Product	7-55
VALIDATING USER INPUT	8-1
Overview of ASP.NET Validation Controls	8-2
The Validation Controls.....	8-2
Using the Simple Validators.....	8-4
Using the RequiredFieldValidator	8-4
Using a RangeValidator to Ensure that Data Falls within a Specified Range.....	8-9
Using a CompareValidator to Compare Values	8-11
Using the Complex Validators	8-14
Validate General Text with the RegularExpressionValidator	8-14
Create Your Own Validation Using the CustomValidator Control	8-17
Summarizing Results with the ValidationSummary Control.....	8-22
Display Modes for the ValidationSummary Control	8-23
Separating Validation into Validation Groups	8-25

LAB 8: VALIDATING USER INPUT.....	8-31
Lab 8 Overview.....	8-32
Add Required Field and Range Validators	8-34
Add a Compare Validator and Validation Summary	8-36
Add a Regular Expression Validator.....	8-38
Add a Custom Validator	8-40
THEMES AND MASTER PAGES.....	9-1
Creating a Consistent Web Site.....	9-2
Reviewing Cascading Style Sheets	9-2
ASP.NET 2.0 Themes.....	9-9
Working with Themes, Folders, and Skins.....	9-10
Applying a Theme	9-12
Creating a Theme	9-13
Working with Themes	9-18
Creating Named Skins.....	9-21
More Issues with Themes	9-25
Master Pages.....	9-29
Creating a Master Page	9-30
Creating a Content Page	9-32
Converting a Standard Page to a Content Page.....	9-36
Adding Default Content.....	9-39
Practical Master Pages	9-42
LAB 9: THEMES AND MASTER PAGES.....	9-49
Lab 9 Overview.....	9-50
Create a Theme.....	9-51
Set Up a Master Page and Content Pages.....	9-57
Create Named Skins.....	9-61
SITE NAVIGATION	10-1
Providers and Data Sources.....	10-2
The Default XmlSiteMapProvider.....	10-2
The SiteMapDataSource Control	10-2
Creating an XML Site Map File.....	10-3
A Hierarchy of Nested siteMapNode Elements.....	10-3
Built-In and Custom Attributes	10-4
Site Navigation Controls	10-5
Breadcrumbs and Hierarchical Navigation.....	10-5

Using the Site Navigation API.....	10-11
Accessing Current and Sibling Nodes	10-11
URL Mapping.....	10-14
Mapping URLs in Web.config	10-14
Adjusting the Site Map	10-15
Using Multiple Site Map “Providers”	10-18
Security Trimming.....	10-20
Authentication and Authorization	10-22
Enabling Security Trimming	10-25
Automatic Role-Based Trimming	10-28
LAB 10: SITE NAVIGATION.....	10-33
Lab 10 Overview.....	10-34
Adding a SiteMap and Menu	10-35
Adding a Category Node and SiteMapPath.....	10-37
DISPLAYING DATA WITH THE GRIDVIEW CONTROL	11-1
Introducing the GridView Control.....	11-2
Displaying Data with the GridView Control	11-3
Edit the Columns.....	11-7
Filter Data in the GridView Control	11-11
Create the DropDownList of Countries	11-11
Filter the Data Based on the Selected Country	11-13
Allow Users to Select from a DropDownList in the Grid	11-16
Introducing Templates	11-16
Convert the Country Field into a Template	11-16
Add a Hyperlink to the Grid.....	11-21
Create the CustomerOrders Page	11-21
Create the Hyperlink	11-23
Deleting a Row and Handling Errors	11-27
Add the Delete Link.....	11-27
Add the Client-Side Alert.....	11-28
Add Event-Handling Code	11-31
What’s Left?	11-33
LAB 11: DISPLAYING DATA WITH THE GRIDVIEW CONTROL	11-39
Lab 11 Overview.....	11-40
Format the Orders Grid and Add Functionality	11-41
Add a Related GridView Control Showing Order Details.....	11-43

Modify the HyperLink Column So That It's Editable	11-45
MANAGING STATE	12-1
Preserving State in Web Applications.....	12-2
Methods of Preserving State.....	12-2
Page-Level State	12-3
Enabling Dynamic Page Modifications.....	12-3
View State and the Page Lifecycle	12-5
Enabling Change Events	12-6
Understanding View State	12-7
When to Disable View State	12-11
The Limitations of Page-Level State	12-13
Using Cookies to Preserve State.....	12-15
Working with Cookies in ASP.NET Code.....	12-17
The Limitations of Using Cookies	12-19
ASP.NET Session State	12-22
Problems in Classic ASP	12-22
Storing Objects in Session State	12-26
Storing ADO.NET Objects in Session.....	12-28
Session State Object Storage.....	12-32
Configuring Session State	12-33
Editing Configuration Files	12-33
Session State Options	12-33
Setting Up an Out-of-Process State Server.....	12-36
Ensuring that Your Data Is Serializable	12-37
Testing StateServer Session State	12-40
Storing Session State in SQL Server.....	12-42
Configuring SQL Server Session State.....	12-42
Testing SQL Server Session State	12-43
Using Cookieless Session IDs.....	12-46
Application State.....	12-48
LAB 12: MANAGING STATE.....	12-53
Lab 12 Overview.....	12-54
Storing Data in Session State.....	12-55
Implementing Out-of-Process Session State Using a State Server....	12-61
MANAGING USERS WITH ASP.NET'S MEMBERSHIP FEATURES.....	13-1
Introduction to Membership and Roles	13-3
Introducing Membership Management in ASP.NET 2.0	13-4

Introducing Role Management in ASP.NET 2.0.....	13-5
The Security Services Stack	13-6
Data Has to Go Somewhere	13-7
Configuring Members and Roles	13-9
Modifying Provider Behavior	13-16
Working with Roles	13-19
Authentication and Cookies	13-22
Using Membership Controls	13-23
LoginStatus Control	13-23
Login Control.....	13-24
LoginView Control.....	13-26
LoginName Control	13-27
ChangePassword Control	13-30
PasswordRecovery Control	13-31
CreateUserWizard Control	13-33
Writing Code to Interact with Membership and Roles.....	13-36
The Membership and MembershipUsers Classes	13-36
The Roles Class.....	13-43
Creating Custom Providers.....	13-47
Setting up the XML Provider	13-48
LAB 13: MANAGING USERS WITH ASP.NET'S MEMBERSHIP FEATURES	13-55
Lab 13 Overview	13-56
Create Users and Add Authentication	13-57
Add Support for Password Handling.....	13-60
Add Access Rules.....	13-63
IMPROVING PERFORMANCE WITH OUTPUT CACHING	14-1
The Importance of Caching	14-2
Improvements over Classic ASP	14-2
Types of Caching in ASP.NET	14-2
Declarative Page Output Caching	14-4
Caching Static Pages.....	14-4
Code Behind the Caching Example Pages.....	14-6
Caching Multiple Versions of a Page	14-8
Caching Page Fragments	14-23
Using VaryByControl.....	14-24
Caching Multiple Versions of a Control on a Page	14-25
Post-Cache Substitution	14-27

Calling a Method to Insert HTML	14-27
Using a Substitution Control	14-28
Caching Configuration	14-30
Output Cache Profiles	14-30
Global Configuration Settings	14-31
LAB 14: IMPROVING PERFORMANCE WITH OUTPUT CACHING	14-37
Lab 14 Overview	14-38
Varying Caching by Form Parameters	14-39
Using a Cache Profile	14-42
USING THE DATALIST AND REPEATER CONTROLS	15-1
Overview of List-Bound Controls	15-2
Creating a Repeater Control	15-4
Binding the Repeater Control to Data	15-7
A More Complex Example	15-8
The CategoryDetail Page	15-11
Creating a DataList Control	15-15
Formatting the DataList	15-16
Binding Data to the DataList	15-18
Displaying Bound Data	15-19
Selecting a Row	15-20
Refreshing the Display	15-20
Editing Data with the DataList	15-21
LAB 15: USING THE DATALIST AND REPEATER CONTROLS	15-35
Lab 15 Overview	15-36
Using the Repeater Control	15-37
Using the DataList Control	15-41
CREATING AND CONSUMING WEB SERVICES	16-1
The Motivation for XML Web Services	16-2
Web Service Requirements and Technologies	16-2
Creating an XML Web Service with Visual Studio	16-5
An Example XML Web Service	16-8
Adding Web Methods	16-8
Testing the Web Service	16-12
Designing XML Web Services	16-14
Providing Services	16-14
Marshalling Data	16-14

Creating Web Service Consumers	16-15
Understanding the Additions to the Project.....	16-17
Calling a Web Service.....	16-21
Discovering Web Services Using UDDI.....	16-23
What Is UDDI?	16-23
LAB 16: CREATING AND CONSUMING WEB SERVICES	16-31
Lab 16 Overview	16-32
Creating an XML Web Service	16-33
Creating a .NET Client.....	16-36
INDEX.....	INDEX-1
