

Advanced .NET Framework 2.0 Using Visual C# 2005:

Volume 1

Table of Contents

INTRODUCTION	INTRO-1
Prerequisites	INTRO-2
Installing the Practice Files	INTRO-3
Software Requirements	INTRO-3
Installation	INTRO-3
About the Author	INTRO-4
APPLICATION CONFIGURATION.....	1-1
Introduction	1-2
.NET Framework Configuration System	1-2
Configuration API	1-4
A Word about Security	1-5
Standard Configuration Sections	1-6
Application Settings	1-6
Connection Strings.....	1-11
Other Standard Sections.....	1-16
Writing Configuration Settings	1-18
Sets of Configuration Settings	1-24
Custom Configuration Sections	1-33
Creating a Custom Section	1-33
Writing Section Handlers	1-34
Configuration Sections and Collections	1-42
Custom Configuration Providers.....	1-49
Settings Provider.....	1-50
SQL Settings Provider	1-52
LAB 1: APPLICATION CONFIGURATION.....	1-65
Lab 1 Overview.....	1-66
Create User and Application Settings.....	1-67
Read Configuration Data	1-69
Read a Connection String.....	1-71
Update an Application Setting	1-73
INSTALLING AND CONFIGURING ASSEMBLIES.....	2-1

Introduction to Assembly Installation	2-2
Using Installation Components	2-3
Predefined Installation Components	2-3
Custom Installation Components	2-10
Running Installation Code	2-16
Configuring Assemblies	2-23
Specifying the .NET Framework Version	2-23
Searching for Specific Assembly Versions	2-25
Configuring Concurrent Garbage Collection	2-26
Registering Remote Objects	2-27
Using the .NET Configuration Tool	2-28
LAB 2: INSTALLING AND CONFIGURING ASSEMBLIES	2-37
Lab 2 Overview	2-38
Use an Installation Component	2-39
Create a Setup Project	2-42
Uninstall an Application from a Windows Command Prompt	2-46
APPLICATION DIAGNOSTICS	3-1
Introduction to System.Diagnostics	3-2
Using an Event Log	3-3
A Security Note	3-3
EventLog Class	3-4
Creating an Event Log	3-5
Reading from an Event Log	3-10
Writing to an Event Log	3-15
Managing System Processes	3-17
Accessing Running Processes	3-18
Starting a New Process	3-23
Monitoring Application Performance	3-27
Performance Counter Sample Application	3-27
Creating Performance Counters	3-30
Using Performance Counters	3-33
LAB 3: APPLICATION DIAGNOSTICS	3-39
Lab 3 Overview	3-40
Work with Event Logs, Sources, and Events	3-41
Work with System Processes	3-47
Start a Process	3-50

DEBUGGING APPLICATIONS	4-1
Introduction	4-2
Debugging .NET Applications	4-3
Interacting with the Debugger	4-3
Examining the Stack Trace	4-5
Debugger Attributes	4-8
Instrumenting an Application	4-20
The Debug Class	4-20
The Trace Class	4-25
Enabling Debugging and Tracing	4-30
Industrial Strength Tracing	4-31
Trace Sources	4-32
Trace Switches	4-34
Trace Listeners	4-35
Filtering Traces	4-38
Configuring Traces	4-38
LAB 4: DEBUGGING APPLICATIONS	4-45
Lab 4 Overview	4-46
Interact with the Debugger	4-47
Use Debugger Attributes	4-49
Instrument Trace Code	4-54
SYSTEM MANAGEMENT INFORMATION	5-1
Introduction	5-2
Objects Wrapping Objects	5-2
Accessing Windows Resources	5-6
Enumerate Physical Drives	5-6
Enumerate Logical Disks	5-9
Enumerate Network Adapters and Connections	5-11
Enumerating System Processes	5-14
Enumerating Paused Services	5-16
Subscribing to Management Events	5-18
Synchronous WMI Events	5-18
Asynchronous WMI Events	5-22
LAB 5: SYSTEM MANAGEMENT INFORMATION	5-29
Lab 5 Overview	5-30
Explore WMI Objects with WMI Tools	5-31

Retrieve WMI Object Information.....	5-35
.NET CODE ACCESS SECURITY	6-1
Introduction.....	6-2
Code Access Security.....	6-3
How Code Access Security Works	6-3
Configuring Code Access Security	6-13
Using Code Access Security with Assemblies.....	6-26
Testing Code Access Security	6-27
Setting Security on Assemblies	6-30
Using Code Access Security with Methods	6-35
Method Permission Requests	6-36
Code Access Security Techniques for Methods	6-45
LAB 6: .NET CODE ACCESS SECURITY	6-57
Lab 6 Overview.....	6-58
Create an Assembly to Access a Protected Resource	6-59
Create a Custom Permission Set and Code Group.....	6-63
Make Permission Requests on an Assembly and Methods.....	6-71
USER- AND ROLE-BASED SECURITY	7-1
Introduction	7-2
Authentication and Authorization	7-2
.NET Role-Based Security	7-3
IIdentity and IPrincipal Interfaces.....	7-4
Windows Identities and Principals	7-5
Setting Principal Policy	7-5
Windows Identity.....	7-6
Windows Principal.....	7-9
Enumerating Group Membership.....	7-12
Impersonation	7-14
Security Demands	7-20
Declarative Demands.....	7-20
Imperative Demands.....	7-23
Generic and Custom Identities	7-25
Generic Identities and Principals	7-25
Custom Identities and Principals.....	7-28
LAB 7: USER- AND ROLE-BASED SECURITY.....	7-39
Lab 7 Overview.....	7-40

Limit Execution to a Windows Group	7-41
Enumerate Group Membership	7-45
Protect a Method through Group Membership	7-47
WINDOWS ACCESS CONTROL	8-1
Windows Security	8-2
DACLS and SACLs	8-3
Exploring DACLS and SACLs	8-5
Access Control in the .NET Framework.....	8-12
Security Access and Audit Rules.....	8-14
Setting Up the Form.....	8-17
Getting the Security Info	8-19
Changing Access Rules.....	8-24
Changing Audit Rules	8-31
Low-Level Security Access.....	8-34
Low-Level ACL and ACE Classes	8-34
Using the Classes	8-35
Ownership, Inheritance, and Propagation	8-39
Securing New Objects	8-39
Ownership.....	8-41
Inheritance and Propagation.....	8-42
LAB 8: WINDOWS ACCESS CONTROL	8-47
Lab 8 Overview.....	8-48
Retrieve Access and Audit Rules for a File	8-49
Create a New File Securely	8-55
Determine the Owner of a File.....	8-58
ENCRYPTING AND HASHING DATA	9-1
Introduction to Cryptography	9-2
Types of Cryptography.....	9-2
Cryptography Issues	9-3
Algorithms	9-4
Cryptography in .NET	9-5
Hashing Data	9-7
.NET Hashing Algorithms.....	9-8
.NET Framework Hashing Classes.....	9-8
Hashing Data Using the .NET Framework.....	9-10
Symmetric Key Encryption.....	9-19

Symmetric Key Algorithms	9-19
.NET Framework Symmetric Key Encryption Classes	9-20
Encrypting Data Using the .NET Framework	9-21
Asymmetric Key Encryption	9-32
Asymmetric Key Encryption Algorithms and .NET Classes	9-32
Getting Valid Key Sizes	9-33
Encrypting Memory Data Using RSA	9-35
Decrypting Data Using RSA	9-38
Digital Signatures	9-39
Digital Signature Algorithms and .NET Classes	9-39
Using the DSA Algorithm Class	9-41
Using the DSA Implementation Class	9-42
Data Protection API	9-44
The DPAPI Process	9-44
DPAPI in .NET	9-46
LAB 9: ENCRYPTING AND HASHING DATA	9-55
Lab 9 Overview	9-56
Hash Data	9-57
Use Symmetric Key Encryption	9-61
Use Asymmetric Key Encryption	9-65
Use Digital Signatures	9-71
Use the Data Protection API	9-74
INDEX	INDEX-1
