

Advanced .NET Framework 2.0 Using Visual Basic 2005: Volume 1 Table of Contents

INTRODUCTION	INTRO-1
Prerequisites	INTRO-2
Installing the Practice Files	INTRO-3
Software Requirements	INTRO-3
Installation	INTRO-3
About the Author	INTRO-4
APPLICATION CONFIGURATION.....	1-1
Introduction	1-2
.NET Framework Configuration System	1-2
Configuration API	1-4
A Word about Security	1-5
Standard Configuration Sections	1-6
Application Settings	1-6
Connection Strings.....	1-11
Other Standard Sections.....	1-15
Writing Configuration Settings	1-17
Sets of Configuration Settings	1-22
Custom Configuration Sections	1-32
Creating a Custom Section	1-32
Writing Section Handlers	1-33
Configuration Sections and Collections	1-41
Custom Configuration Providers.....	1-47
Settings Provider.....	1-48
SQL Settings Provider	1-50
LAB 1: APPLICATION CONFIGURATION.....	1-63
Lab 1 Overview	1-64
Create User and Application Settings.....	1-65
Read Configuration Data	1-67
Read a Connection String.....	1-69
Update an Application Setting	1-71

INSTALLING AND CONFIGURING ASSEMBLIES.....	2-1
Introduction to Assembly Installation	2-2
Using Installation Components	2-3
Predefined Installation Components	2-3
Custom Installation Components	2-10
Running Installation Code	2-16
Configuring Assemblies	2-24
Specifying the .NET Framework Version	2-24
Searching for Specific Assembly Versions	2-26
Configuring Concurrent Garbage Collection	2-27
Registering Remote Objects	2-28
Using the .NET Configuration Tool	2-29
LAB 2: INSTALLING AND CONFIGURING ASSEMBLIES.....	2-39
Lab 2 Overview.....	2-40
Use an Installation Component.....	2-41
Create a Setup Project	2-44
Uninstall an Application from a Windows Command Prompt	2-48
APPLICATION DIAGNOSTICS	3-1
Introduction to System.Diagnostics	3-2
Using an Event Log	3-4
A Security Note	3-4
EventLog Class.....	3-5
Creating an Event Log	3-6
Reading from an Event Log	3-11
Writing to an Event Log.....	3-15
Managing System Processes	3-17
Accessing Running Processes	3-18
Starting a New Process	3-23
Monitoring Application Performance.....	3-27
Performance Counter Sample Application.....	3-27
Creating Performance Counters	3-30
Using Performance Counters.....	3-33
LAB 3: APPLICATION DIAGNOSTICS	3-39
Lab 3 Overview.....	3-40
Work with Event Logs, Sources, and Events.....	3-41
Work with System Processes	3-47

Start a Process	3-50
DEBUGGING APPLICATIONS	4-1
Introduction	4-2
Debugging .NET Applications	4-3
Interacting with the Debugger	4-3
Examining the Stack Trace	4-5
Debugger Attributes	4-8
Instrumenting an Application	4-20
The Debug Class	4-20
The Trace Class	4-25
Enabling Debugging and Tracing	4-30
Industrial Strength Tracing	4-32
Trace Sources	4-33
Trace Switches	4-35
Trace Listeners	4-36
Filtering Traces	4-38
Configuring Traces	4-39
LAB 4: DEBUGGING APPLICATIONS	4-45
Lab 4 Overview	4-46
Interact with the Debugger	4-47
Use Debugger Attributes	4-49
Instrument Trace Code	4-55
SYSTEM MANAGEMENT INFORMATION	5-1
Introduction	5-2
Objects Wrapping Objects	5-2
Accessing Windows Resources	5-6
Enumerate Physical Drives	5-6
Enumerate Logical Disks	5-9
Enumerate Network Adapters and Connections	5-11
Enumerating System Processes	5-13
Enumerating Paused Services	5-14
Subscribing to Management Events	5-16
Synchronous WMI Events	5-16
Asynchronous WMI Events	5-20
LAB 5: SYSTEM MANAGEMENT INFORMATION	5-25
Lab 5 Overview	5-26

Explore WMI Objects with WMI Tools	5-27
Retrieve WMI Object Information.....	5-32
.NET CODE ACCESS SECURITY	6-1
Introduction.....	6-2
Code Access Security.....	6-3
How Code Access Security Works	6-3
Configuring Code Access Security	6-13
Using Code Access Security with Assemblies.....	6-26
Testing Code Access Security	6-27
Setting Security on Assemblies	6-30
Using Code Access Security with Methods	6-36
Method Permission Requests	6-37
Code Access Security Techniques for Methods	6-45
LAB 6: .NET CODE ACCESS SECURITY	6-57
Lab 6 Overview.....	6-58
Create an Assembly to Access a Protected Resource	6-59
Create a Custom Permission Set and Code Group.....	6-63
Make Permission Requests on an Assembly and Methods.....	6-71
USER- AND ROLE-BASED SECURITY	7-1
Introduction.....	7-2
Authentication and Authorization	7-2
.NET Role-Based Security	7-3
IIdentity and IPrincipal Interfaces.....	7-4
Windows Identities and Principals	7-5
Setting Principal Policy	7-5
Windows Identity.....	7-6
Windows Principal.....	7-9
Enumerating Group Membership.....	7-12
Impersonation	7-14
Security Demands	7-20
Declarative Demands.....	7-20
Imperative Demands.....	7-23
Generic and Custom Identities	7-25
Generic Identities and Principals	7-25
Custom Identities and Principals.....	7-28

LAB 7: USER- AND ROLE-BASED SECURITY.....	7-39
Lab 7 Overview.....	7-40
Limit Execution to a Windows Group.....	7-41
Enumerate Group Membership.....	7-45
Protect a Method through Group Membership.....	7-47
WINDOWS ACCESS CONTROL.....	8-1
Windows Security.....	8-2
DACLs and SACLs.....	8-3
Exploring DAACLs and SACLs.....	8-5
Access Control in the .NET Framework.....	8-12
Security Access and Audit Rules.....	8-14
Setting Up the Form.....	8-17
Getting the Security Info.....	8-19
Changing Access Rules.....	8-23
Changing Audit Rules.....	8-30
Low-Level Security Access.....	8-34
Low-Level ACL and ACE Classes.....	8-34
Using the Classes.....	8-35
Ownership, Inheritance, and Propagation.....	8-39
Securing New Objects.....	8-39
Ownership.....	8-41
Inheritance and Propagation.....	8-42
LAB 8: WINDOWS ACCESS CONTROL.....	8-49
Lab 8 Overview.....	8-50
Retrieve Access and Audit Rules for a File.....	8-51
Create a New File Securely.....	8-57
Determine the Owner of a File.....	8-60
ENCRYPTING AND HASHING DATA.....	9-1
Introduction to Cryptography.....	9-2
Types of Cryptography.....	9-2
Cryptography Issues.....	9-3
Algorithms.....	9-4
Cryptography in .NET.....	9-5
Hashing Data.....	9-7
.NET Hashing Algorithms.....	9-8
.NET Framework Hashing Classes.....	9-8

Hashing Data Using the .NET Framework.....	9-10
Symmetric Key Encryption.....	9-18
Symmetric Key Algorithms.....	9-18
.NET Framework Symmetric Key Encryption Classes.....	9-19
Encrypting Data Using the .NET Framework.....	9-20
Asymmetric Key Encryption.....	9-30
Asymmetric Key Encryption Algorithms and .NET Classes.....	9-30
Getting Valid Key Sizes.....	9-31
Encrypting Memory Data Using RSA.....	9-33
Decrypting Data Using RSA.....	9-35
Digital Signatures.....	9-36
Digital Signature Algorithms and .NET Classes.....	9-36
Using the DSA Algorithm Class.....	9-38
Using the DSA Implementation Class.....	9-39
Data Protection API.....	9-41
The DPAPI Process.....	9-41
DPAPI in .NET.....	9-43
LAB 9: ENCRYPTING AND HASHING DATA.....	9-51
Lab 9 Overview.....	9-52
Hash Data.....	9-53
Use Symmetric Key Encryption.....	9-57
Use Asymmetric Key Encryption.....	9-61
Use Digital Signatures.....	9-67
Use the Data Protection API.....	9-70
INDEX.....	INDEX-1
